

CoCreate® Part Library

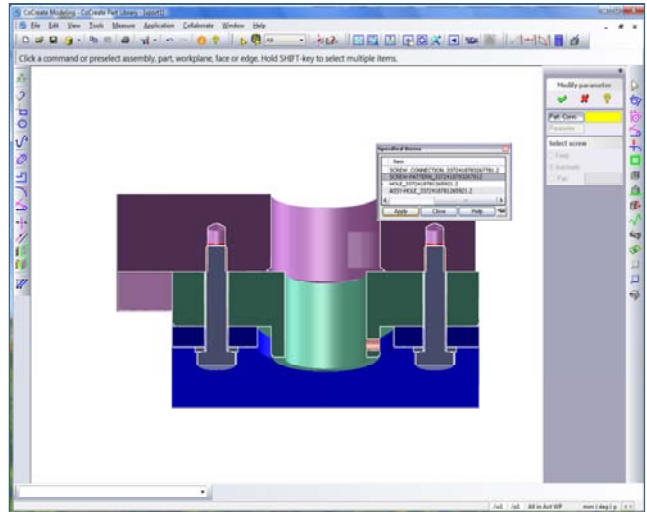

A complete library of standard components saves effort and costs

With CoCreate Part Library you can leverage over 93,000 standard parts to quickly create your product design.

Easily insert standard components such as bolts, washers, nuts, bearings and miscellaneous hardware into product designs. Accelerate the design process by using pre-modeled parts that meet ANSI, DIN, ISO and JIS standards.

Key Benefits

- Easily insert standard fasteners and components into product designs and avoid spending time modeling off-the-shelf components
- Fully detail product designs to include all components and fasteners. Eliminate errors in fastener selections and housing constraints. Your first prototype can be your only prototype
- Optimize cost savings by designing with company-standard manufacturing components
- Add CoCreate Model Manager to automatically generate a complete manufacturing bill of materials that includes all details of the product design
- Automatically insert product manufacturing information directly into your model using the embedded design intelligence of Part Library components
- Speed drawing creation by transferring product manufacturing information associated with CoCreate Part Library components directly to drawings within CoCreate Annotation

Create and modify multiple screw connections complete with drilled holes and accessories (such as nuts and washers) in one step

Features and Specifications

Standard Parts Library

- Take advantage of more than 400 standards (DIN, ISO, ANSI, and JIS) with more than 93,000 parts: screws, nuts, washers, rings, bolts, section steel, bearings, and more
- Simply position standard parts in the design
- Define company standard parts with a graphical user interface and merge company-specific parts with standard parts
- Add, copy designed parts (parametric parts requires CoCreate Advanced Design)
 - Easily manage similar parts with different materials

User-Specific Standards

- Add additional standards to user specific area

Assign Materials

- Allocate materials to assemblies and parts also recursively
- Select materials within tables
- Assign color, density, reflection, and transparency
- Automatically apply materials from the bill of materials
- Customize material table via menus

Threads

- Mark thread faces in CoCreate Modeling
- Automatically correct thread diameter
- Guarantee correct representation in Annotation
- Modify and inquire threads

Drills

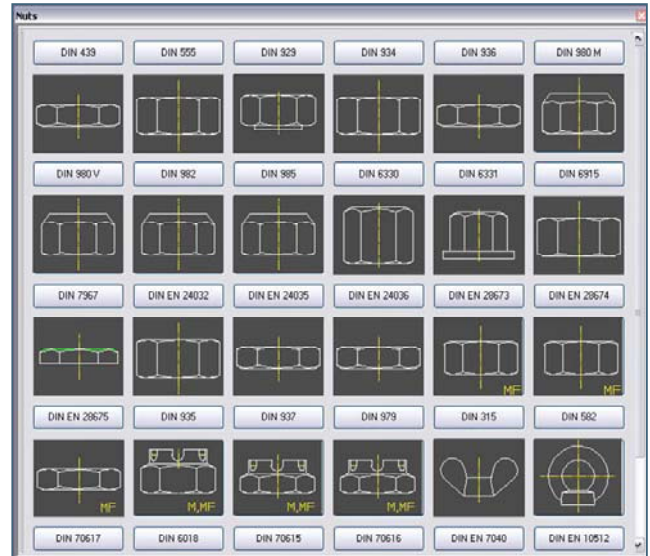

- Create and modify drills and drill patterns
- Drill according to DIN or user-defined parameters
- Drill through several parts
- Automatically dimension drills in Annotation
- Add manufacturing related information during definition of bore holes

Fixture Connection Wizard

- Quickly create and modify complete bolted connections including the drills (through several parts), screws, nuts, and washers
- Work easily with wizard-based user interface
- Immediately see selected parameters

Tolerance and Fit

- Place tolerance & fit table on Drawings
- Easily edit and use tolerance fit table
- Customize material via menus

CoCreate Modeling is packed with an extensive list of parts. Extra components are easily added for specialized needs

Integrated with CoCreate Model Manager

- Find standard parts automatically stored in CoCreate Model Manager
- Manage company-specific standard parts
- Assign article numbers used with database

System Requirements

CoCreate Part Library supported operating systems:

- Windows Vista™ 32-bit and 64-bit Editions of Ultimate, Enterprise, and Business
- Windows® XP™ Professional 32-bit and 64-bit Editions
